J. Bacteriol. 184:4601-4611(2002).

1. EUNCTION: Catalyzes the acyloin condensation reaction between C atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yield 1-deoxy-D-xylulose-5-phosphate (DXP) (By similarity).

1. CATALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = 1-deoxy-D-xylulose 5-phosphate + CO(2).

1. COFACTOR: Binds 1 thiamine pyrophosphate per subunit (By similarity).

1. Similarity Victorians Personnel Historynthesis pathway; first step.

1-deoxy-D-xylulose 5-phosphate synthase (EC 2.2.1.deoxyxylulose-5-phosphate synthase) (DXP synthase)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nature 413:852-856(2001).

Nature 413:852-856(2001).

Propertion: Catalyzes the acyloin condensation reaction between atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yi 1-deoxy-D-xylulose-5-phosphate (DXP) (By similarity).

Propertic ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = deoxy-D-xylulose 5-phosphate + CO(2).

Representation of the pyrophosphate per subunit (By -1-COPACTOR: Binds 1 thiamine pyrophosphate pyrophosphate pyrophosphate pyrophosphate pyrophosphate pyrophosphate pyrophosphate pyrophosphate pyrophosphate p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=LTZ / SGSC1412 / ATCC 700720;
